Work Experience

Cloud lion, Canada (Remote) Jan 2022 - Present *Junior Developer*

   • Worked in the Zoho Application like Zoho creator, CRM to customize the product for the users with the help of deluge script

   • Created the Widget Applications using the HTML, CSS, JavaScript and React JS for the front-end development

   Excellence Telecom Sept 2018 - Aug 2021 *Quality Analyst*

   • Worked on Quality Checking for the Mobile Phones and software troubleshooting capabilities

   • Verified the each and every cases of the Phone working principles and added the report of issues.

Project Work

   Visavie: I recently developed the user interface (UI) for a module designed for a residence for elderly people in Canada. This involved creating an intuitive and accessible layout to meet the needs of the elderly residents. The design focuses on ease of use, ensuring that residents can navigate the interface without difficulty.

   Tech Stack: HTML, CSS, JavaScript, Zoho CRM (Deluge)

   AIM Insurance: I have created an enrolment form for an insurance client. The form is built using HTML, CSS, and jQuery, ensuring a user-friendly and responsive design. This form allows clients to easily submit their information for insurance coverage.

   Tech Stack: HTML, CSS, jQuery, Zoho Creator (Deluge)

   REC-Protect: I have created the form and backend flow for an application using Zoho Creator. This development utilized Deluge script to ensure seamless integration and functionality. The form captures user inputs efficiently, while the backend flow processes and manages the data effectively.

   Tech Stack: Zoho Creator (Deluge)

   Mark Edward: I have developed the backend functionality for this website using Zoho Creator and Deluge script. This involved writing custom scripts to handle data processing, automation, and business logic. The implementation ensures that the backend operations run smoothly, providing a good foundation for the website's features and services.

   Tech Stack: Zoho Creator, Zoho CRM (Deluge)

   Pal Plus: I have developed a hotel booking web application featuring a calendar-based widget using jQuery and various other components. This widget allows users to select dates seamlessly for their bookings.

   Tech Stack: HTML, CSS, JavaScript, Zoho Creator (Deluge)

Education

St. Peters University Aug 2014 - May 2018 B.Tech. in Information Technology *CGPA: 6.58/10* Relevant Coursework: Object Oriented Programming, Databases, Discrete Maths, Data Structures and Algorithms, Operating Systems, Computer Networks, Advance Data Structures and Algorithms.

Courses and Certificates

- **Aruba Networks:** Completed the Aruba networks for the basic of computer networking it covers the IP address, OSI model, DHCP, TCP and UDP concepts
  Certificate
